 - [Verify](#)
 - [Packaging](#)
 - [Release](#)
 - [Configure](#)
 - [Monitor](#)

Monitoring is an important link in a DevOps toolchain. It allows IT organization to identify specific issues of specific releases and to understand the impact on end-users.

A summary of Monitor related activities are:

- Performance of IT infrastructure
- End-user response and experience
- Production metrics and statistics

Information from monitoring activities often impacts Plan activities required for changes and for new release cycles. Notable vendors are BigPanda, Ganglia, New Relic, Wireshark, and Plumb.

- Knowledge of monitoring tools (Application Insights, New Relic., Helm, Prometheus, Graphana, etc.)
