Enterprise service bus (ESB) 3

Enterprise service bus (ESB)

An enterprise service bus (ESB) implements a communication system between mutually interacting software applications in a Service Oriented Architecture (SOA).

Snippet from Wikipedia: ***Enterprise service bus***

> An **enterprise service bus** (**ESB**) implements a communication system between mutually interacting software applications in a service-oriented architecture (SOA). It represents a software architecture for distributed computing, and is a special variant of the more general client-server model, wherein any application may behave as server or client. ESB promotes agility and flexibility with regard to high-level protocol communication between applications. Its primary use is in enterprise application integration (EAI) of heterogeneous and complex service landscapes.
