Snippet from [Wikipedia: Extranet](#)

An **extranet** is a controlled private network that allows access to partners, vendors and suppliers or an authorized set of customers – normally to a subset of the information accessible from an organization's intranet. An extranet is similar to a DMZ in that it provides access to needed services for authorized parties, without granting access to an organization's entire network.

Historically, the term was occasionally also used in the sense of two organizations sharing

their internal networks over a virtual private network (VPN).
