

Office 365

Sway

Create and share interactive reports, presentations and personal stories.

Microsoft Sway is a professional digital storytelling app for business that helps you and your colleagues express ideas using an interactive, web-based canvas. Microsoft Sway's built-in design engine helps you produce professional, visually-appealing reports, presentations, and more without the need for extensive formatting or additional training. You can also modify the results to get the unique look and feel you want. Microsoft Sway makes your creation look great in any browser on any screen, and it can be shared with colleagues and customers by simply sending a link. Microsoft Sway helps you find and pull together all sorts of content without leaving the app, so you can drag and drop your images, text, videos, and charts right on to your canvas.

Snippet from [Wikipedia: Microsoft Sway](#)

Microsoft Sway is a presentation program and is part of the Microsoft Office family of products. Sway was offered for general release by Microsoft in August 2015. It allows users who have a Microsoft account to combine text and media to create a presentable website. Users can pull content locally from the device in use, or from internet sources such as Bing, Facebook, OneDrive, and YouTube. An unrelated web editing program in the evolution of web designers also developed by Microsoft in the past was Microsoft FrontPage and Microsoft Expression Web. These programs, however, did not include a method for hosting websites the way that Sway does.

Sway sites are stored on Microsoft's servers and are tied to the user's Microsoft account. They can be viewed and edited from any web browser through Office for the web. There is no offline editing or viewing function. They can also be accessed using apps for Windows 10 and

iOS.
