Travis CI 3

Travis CI

https://travis-ci.org/

Snippet from Wikipedia: ***Travis CI***

> **Travis CI** is a hosted continuous integration service used to build and test software projects hosted on GitHub, Bitbucket, GitLab, Perforce, Apache Subversion and Assembla.
>
> Travis CI was the first CI service that provided services to open-source projects for free but as December 2020 no longer does so. TravisPro provides custom deployments of a proprietary version on the customer's own hardware.
>
> The main software is proprietary. Some adjacent tools like API clients are open-source.
